# Phase 1 (Web Changes)

1. Karenderia Web:
   - https://www.mealmade.eu/ Redesign a provided HTML.

2. redesign the web frontend as per your provided design in fiverr.

3. Look at the flags. Can you change them back to what they were?

4. Could you add the basket on mobile like on www.thuisbezorgd.nl on mobile? So always visible when adding something? Please check thuisbezorgd on your phone

5. We need to add our logo to all the notification e - mails (so merchant sign ups, cancelled orders etc)

6. When there is an order in Dutch how can the merchant translate it in Croatian? So, the recipient needs to be translated for the merchant to know what food to make)

7. When someone orders, they can only add time of over 45 min. Before that it's just ASAP. Otherwise, they want their food faster than can be delivered. Maybe turn ASAP on as standard, pre-selected? + add asap for take away also

8. Can we make a pop up with each order on the backend where the merchant can give an approx. time?

9. The background/header of the merchant doesn't show up on mobile.

10. In the merchant panel disable a couple of functions. Like add menu etc. But if we do auto login than we need to be able upload menu.

11. Make the pop up when you leave the page disappear. And add just the pop up for when you leave and you basket will be lost. 'Are you sure you want to leave? your basket will be empty' something like this

12. The information section needs to be also translated. So, like when we add a new food item https://prnt.sc/zy2ubs

13. Can we do commission only merchants sign up? And dine in only. So, make this package commission only. And add 1 package, dine in only

14. add Login with Facebook and login with google.
